

### Introducing a Powerful, Interactive Tool for Overlaying Data and Historical Images

Xplorer is a new add-on to any ERIS Report, including US Database Reports, Physical Setting Reports, or Historical Products such as Aerial Photographs, Topographic Maps, and Fire Insurance Maps. Xplorer allows you to quickly visualize and analyze all of the environmental risk information related to a particular location — all in one place, with built-in tools for analysis and customization.

### Features of ERIS Xplorer

- **Overlay data and multiple images** over current street layers and compare changes over time.
- **Switch between Street, Satellite, or Terrain** base layers to more effectively analyze the project property and related data.
- **Accommodate Custom/Linear Reports** for efficient review and analysis.
- **View the transition** of study area images through the decades using the Transition Tool.
- **Filter data sources** and view only the desired data sources on the map.
- **Look up specific addresses or keywords** using the Search functionality.
- **Calculate the distance** between two points or within a polygon area using the Measure Tool.
- **Draw and/or add comments** directly to any layer, then print to PDF for easy sharing between colleagues and clients.
- **Save views** with your drawings, measurements, notations, and filters.
- **Centralize Reports and Historical Products** for the study area all in one place.  
(No need to leave the application to download reports.)

Call your **REGIONAL ACCOUNT MANAGER** today to arrange a **DEMO**. Visit our website at [erisinfo.com/xplorer](http://erisinfo.com/xplorer), or contact ERIS directly at 1-866-517-5204.
